

Angular Mitre Gauge (MI-99520)

The redesigned Magnum Industrial MI-99520 angular mitre gauge features a triangular design that adds support and eliminates the play that can affect the accuracy of traditional mitre gauges. The MI-99520 is built to our specs to help you make precise, repeatable cuts in professional production settings. It is also equipped with an adjustable wing that extends up to 42" — ideal for precision framing projects. Plus, its stop flips out of the way so you can quickly and safely handle everything from small pieces to large panels.

Design
Adds
Support**

Features:

- Telescoping wing extends to 42", providing additional support
- Anti-slip fence face keeps material in place
- Expandable guide bar helps eliminate play
- Indexed graduations and automatic stops for popular angles make setup easy
- Fence body adjusts left and right to fully support saw blade and reduce clearance
- Reversible design compatible with left- or right-hand tilt saws and most mitre slots
- Weighs only 7.9 lbs
